Deterioration of concrete may be caused by physical
and/or chemical factors. The corrosion of concrete
is dependent on the properties of the hardened cement,
the quality of the concrete and the corrosivity of the
surrounding medium. The influences of the carbon

[p. 231ff].

The basic equation is presented for the angle of rotation ϕ in the position of equilibrium involving a spatial deflection which is associated with lateral buckling. This equation, which is valid on the assumption that the material is elastic and homogeneous, is solved to determine the lateral buckling load on a beam which is suspended by means of ropes, and which is acted on by dead load, in the following cases: (a) beam with cross-section which is constant and free to warp; (b) beam with a cross-section which is free to warp and varies linearly in depth; and (c) beam with cross-section which is constant, monosymmetrical, and not free to (Engineering--Civil, TT, v. 5, no. 12) (over)

The purpose of this communication is briefly to call
attention to trichloroethylene poisoning and at the
same time to indicate the pyridine-alkali reaction, as
it is called, as a simple and practical method for
verifying the diagnosis. (Author)
